STATEMENT OF PURPOSE

My professional objective is to continue advancing within senior quality leadership positions where I can leverage over 20 years of international experience in quality management, compliance, auditing, and infrastructure project delivery.

Throughout my career, I have developed expertise across oil & gas, petrochemical, power generation, offshore, manufacturing, and EPC environments, supporting major infrastructure programs requiring rigorous quality governance, regulatory compliance, and operational excellence.

My leadership philosophy centers on establishing robust quality management systems that not only ensure compliance but also create measurable business value through risk reduction, performance improvement, contractor accountability, and continuous improvement. I believe that quality should function as a strategic business enabler rather than solely as a compliance requirement.

Working on projects for EDF, BP, Chevron, INEOS, Total, Wood Group, Lloyd's Register, Transocean, and other industry leaders has strengthened my ability to manage complex stakeholder environments while maintaining the highest standards of quality assurance and regulatory compliance.

The Regional Quality Manager role represents a natural progression in my career and aligns closely with my experience leading quality programs across large-scale energy infrastructure projects. I am eager to contribute my expertise in quality governance, audit management, contractor quality oversight, supplier compliance, performance measurement, and strategic quality leadership to support successful project delivery and long-term organizational growth.

I am committed to continuous professional development and to driving quality cultures that support excellence, safety, compliance, and sustainable operational performance across all project phases.
